

- Command-line based tool for scheduling video capture off of local (webcams) or IP cameras with interactive (still being worked on) and file input modes.
- Has logging for scheduled captures and start of execution on those captures, as well as desktop notifications of start of captures
- Expanding functionality to:
  - Streaming mode, does not record but displays live on screen
  - IP Camera search tool (specific to CAM<sup>2</sup> Database cameras)
  - Dependency Installation Script
  - Active mode input history
